EDUCATION

Georgia Institute of Technology Atlanta, GA December 2026

- **Major**: Bachelor of Engineering in Aerospace Engineering. **GPA**: 3.38/4.00
- **Honors**: Hope Scholarship, Dean's List
- **Relevant Coursework**: Control Systems, Jet & Rocket Propulsion, Spacecraft Flight Dynamics, Spacecraft Operations

SKILLS

Software: Python, MATLAB, SolidWorks, Microsoft Office, OpenRocket, Github, Siemens NX Cad, SysML
Design: 3D Printing, Lathe Machine, Table Saw, Drill Press

PROFESSIONAL EXPERIENCE

NASA Marshall Space Flight Center – Human Landing System (HLS)
NASA OSTEM Intern, Lunar TRN Camera Simulation August 2026–December 2026

- Integrating Unreal Engine camera imagery with the 6-DoF GNC simulation to support lunar Terrain Relative Navigation (TRN) testing
- Incorporating digital elevation and albedo maps to improve terrain and surface reflectance in simulated images
- Developing camera model fidelity, including radial lens distortion, to better represent imagery
- Supporting Linux and parallel simulation capability for Monte Carlo testing and comparison of TRN algorithms

Georgia Institute of Technology – High-Pressure Experimental Propulsion Laboratory (HPEPL)
Night Shift Cryogenic Test Operations July 2025-December 2025

- Regulated LN_2 pressure, fill level, and venting to maintain cryogenic test chamber stability during overnight operations
- Executed cryogenic test procedures and safety protocols supporting rocket engine testing and off-nominal response
- Monitored real time subsystem telemetry and escalated off nominal conditions to test campaign leads

NASA L'SPACE Academy

NASA Proposal Writing & Evaluation Experience (NPWEE) August 2025-Present

- Selected participant in NASA's national proposal development and academy sponsored by Marshall Space Flight Center
- **Co-authored an award-winning proposal selected for $10,000 in continuation funding; continuing project development through a year-long effort**
- Trained in proposal evaluation and scoring using NASA solicitation review criteria

Mission Concept Academy (MCA) January 2026–May 2026

- Developed a preliminary space mission concept following the NASA mission life cycle in a 15-week, industry-led program
- Conducted subsystem trade studies and spacecraft configuration using Siemens NX and JMARS for planetary data analysis
- Worked as **Lead Systems Engineer** for a team environment, mirroring real NASA mission development workflows

ENGINEERING PROJECTS

Guidance, Navigation, and Control (GNC) Team, Ramblin' Rocket Cub August 2025 – December 2025

- Updated GNCSIM with a calibrated actuator model and validated closed-loop response against static-fire data
- Implemented actuator modeling in flight software with deflection/rate limits and verified HIL/SIL command tracking

RESEARCH & SYSTEMS ENGINEERING

Georgia Institute of Technology – Aerospace Systems Design Laboratory (ASDL), MBSE Branch
Undergraduate Research Assistant May 2026-August 2026

- Developed SysML models in Cameo to define system structure, behavior, and requirements
- Integrating parametric tool Siemens NX to support cross domain trade studies

INTERESTS

Mountain Biking, Hiking, Guitar, Skateboarding, Backpacking
